SECJ 2203 SOFTWARE ENGINEERING
ASSIGNMENT 1 : PROJECT PROPOSAL

Criteria	Excellent (9-10)	Good (7-8)	Fair (5-6)	Unsatisfied (0-4)	Remarks
Introduction - Need(N) (3 marks)	Clearly identifies a specific, critical need or problem that the proposed system XYZ addresses. Provides strong, relevant evidence from research, user feedback, or domain-specific challenges to validate the need.	Explains the need addressed by the system with sufficient clarity, but supporting evidence may lack depth or specificity.	Presents the need but with limited clarity or relevance to the domain. Supporting evidence is basic or weak.	Fails to identify a clear need or lacks coherence. Little to no supporting evidence provided.	
Introduction - Approach(A) (3 marks)	Provides a comprehensive and detailed description of the approach (e.g., mobile app, cloud-based solution, AI/smart technologies), with a clear explanation of key features and operations.	Describes the approach with reasonable clarity and detail, covering essential aspects of the system's design and features.	Provides a basic explanation of the approach but lacks detail or precision about the key features or technologies.	The approach is poorly explained, with minimal or confusing details about how the system works.	
Introduction - Benefit(B) (3 marks)	Clearly outlines significant and impactful benefits of the proposed system for the target users or stakeholders. Articulates specific improvements in usability, performance, or cost-effectiveness.	Highlights the benefits of the system adequately, though with some missing elements or less impactful descriptions.	Mentions some benefits, but they lack significance or relevance to the target audience.	The benefits are unclear or inadequately explained, with little to no relevance to the proposed system's purpose.	
Introduction - Competitor(C) (3 marks)	Provides a thorough comparison with relevant competitors or similar solutions, highlighting key differentiators and the system's unique advantages.	Identifies competitors and describes some differences, though the comparison is moderate or lacks depth.	Mentions competitors, but fails to demonstrate clear differentiators or advantages of the proposed system.	No competitor analysis provided, or the comparison is inadequate and fails to show the uniqueness of the proposed system.	
Identification of Existing Systems (4 marks)	Clearly identifies and provides detailed descriptions of any existing computerized or manual systems relevant to the domain.	Accurately identifies and describes existing systems, though some details or clarity may be lacking.	Identifies existing systems but lacks specificity or provides limited descriptions.	Fails to identify or describe relevant existing systems, or descriptions are unclear or irrelevant.	
Issues or Problems with Existing Systems (4 marks)	Clearly lists and elaborates on at least two significant issues or problems of existing systems, supported by evidence.	Lists and elaborates on issues or problems, though some may lack depth or clarity.	Lists issues or problems but lacks sufficient detail or clarity in explanation.	Fails to identify or explain significant issues or problems with existing systems.	
Proposed System (10 marks)	A highly clear and concise explanation of the proposed system, including users' roles and their interactions with the system. The description is easy to follow and free from ambiguity.	A clear explanation of the proposed system, users' roles, and interactions, with minor instances of ambiguity.	Provides an explanation but may lack clarity in describing users' roles or interactions, resulting in some confusion.	Fails to provide a clear or coherent explanation of the proposed system, users' roles, or interactions, leading to significant confusion or misunderstanding.	
Software Process - Justification on Choice (5 marks)	A highly convincing and well-justified selection of the ideal software process model for the proposed system. The rationale is clear, comprehensive, and effectively supports the choice.	A convincing justification for the chosen process model, though some details or reasoning may be less clear or slightly less comprehensive.	Provides a justification for the choice but may lack depth or clarity in explaining the rationale.	Fails to provide a clear or coherent justification for the chosen process model.	
Software Process - Detailed Activities (10 marks)	A comprehensive set of detailed activities that cover the software development life cycle (SDLC) relevant to every phase of the chosen software process model. The description is thorough, wellorganized, and easy to follow.	A detailed set of activities for each phase of the chosen process model, though some details or organization may be less clear or slightly less comprehensive.	Offers a description of activities for each phase but may lack depth, clarity, or effective organization, resulting in some confusion.	Fails to provide a clear or coherent set of detailed activities for each phase.	
Software Process - Deliverables and Duration (5 marks)	A suitable durations for every phase of the chosen process model, assigns person(s) in charge, and proposes appropriate deliverables for each phase. The schedule is well-structured, comprehensive, and feasible.	Durations, assignments, and deliverables for each phase, though some aspects may lack clarity or feasibility.	Offers proposed durations, assignments, and deliverables, but may lack detail, clarity, or effective organization, making it somewhat challenging to understand.	Fails to provide a clear, well-structured schedule, assignments, or deliverables for each phase.	
Project Schedule (5 marks)	A highly effective alignment between the project schedule, activities, and assigned responsibilities with the chosen software process model from Section 4. The Gantt chart is meticulously crafted and directly reflects the process model.	A strong alignment between the project schedule and the chosen process model, though there may be minor inconsistencies or areas where alignment could be more explicit.	Exhibits some alignment between the project schedule and process model, but there are noticeable inconsistencies or a lack of clarity in the alignment.	Lacks alignment between the project schedule and the chosen process model, or the Gantt chart is insufficiently explained or missing.	
References (2 marks)	Complete and accurately applied APA style guidelines in writing the cited references. Totally used only books, journals or other reliable internet resources.	Moderately complete and accurately applied APA style guidelines in writing the cited references. Adequately used only books, journals or other reliable internet resources.	Incomplete and inaccurate application of APA style guidelines in writing the cited reference. Used at least one book or journal source. One or more resources was Wikipedia or another unreliable resource.	No application of APA style guidelines in writing the cited reference. Used Wikipedia or other unreliable internet resources. None of the resources are books or from journals.	
Overall Report Quality (3 marks)	Complete organization of report body with cover page, table of content, page number. Minimum typo errors	Moderately complete organization of report body with cover page, table of content, page number. Contains minor typo errors	Incomplete organization of report body with cover page, table of content, page number. Contains some typo errors	Poor organization of report body with cover page, table of content, page number. Contains major typo errors
