SECP2523 – DATABASE (WBL)

SEMESTER I - SESSION 2026/2027

PHASE 1 (P1): PROJECT PROPOSAL GUIDELINES AND ASSESSMENT RUBRIC

Course / assessment	Details
Assessment	Phase 1: Group Project Proposal
Weightage	10%
Submission deadline	13 November 2026 (Friday – BEFORE 10PM)

1. Purpose and expected outcome:

Students work with a real stakeholder to investigate an existing (AS-IS) business process, identify database-related problems, define the scope and requirements for a proposed (TO-BE) database application, and plan the work.

2. P1 project activities and required deliverables:

No.	Activity	Required evidence in proposal
1.	Study organisational background, existing practices and problems	Project overview; organisational background; problem statement; proposed solution and benefits; objectives and scope
2.	Establish system boundaries and identify user perspectives	System boundaries and major user views/roles
3.	Plan project execution, people and time	Human-resource roles and Gantt chart (with realistic milestones)
4.	Investigate existing workflow and business rules with a stakeholder	AS-IS process flow, TO-BE DFD (Context Diagram and Diagram Level 0) for the proposed system

3. Proposal Structure

1. Introduction
2. Background Study
3. Problem Statement
4. Proposed Solutions
5. Objectives
6. Scopes
7. Project Planning (Human resource & Gantt chart)
8. Requirement Analysis (AS-IS Flowchart & TO-BE DFD)
9. Benefits of Proposed System
10. Conclusion

4. Assessment rubric (four performance levels)

The reference rubric uses High (4), Average (3), Low (2), and Unsatisfied (1).

The revised indicators below make the criteria more specific to the required proposal. No criterion weights were stated in the example; the lecturer should confirm any weighting or score-conversion method before assessment.

4.1 Organisational Background, Existing Practices and Problems

High (4)	Average (3)	Low (2)	Unsatisfied (1)
Provides a comprehensive and well-organised project overview and organisational background. Clearly analyses existing practices and problems. Presents a relevant proposed solution, realistic benefits, well-defined objectives, and appropriate scope.	Provides a comprehensive and well-organised project overview and organisational background. Clearly analyses existing practices and problems. Presents a relevant proposed solution, realistic benefits, well-defined objectives, and appropriate scope.	Provides a comprehensive and well-organised project overview and organisational background. Clearly analyses existing practices and problems. Presents a relevant proposed solution, realistic benefits, well-defined objectives, and appropriate scope.	Provides a comprehensive and well-organised project overview and organisational background. Clearly analyses existing practices and problems. Presents a relevant proposed solution, realistic benefits, well-defined objectives, and appropriate scope.

4.2 System Boundaries and User Perspectives

High (4)	Average (3)	Low (2)	Unsatisfied (1)
Clearly and accurately defines the system boundaries, including what is included and excluded. Identifies all major user roles and their relevant perspectives, responsibilities, and interactions with the proposed system.	Clearly and accurately defines the system boundaries, including what is included and excluded. Identifies all major user roles and their relevant perspectives, responsibilities, and interactions with the proposed system.	Clearly and accurately defines the system boundaries, including what is included and excluded. Identifies all major user roles and their relevant perspectives, responsibilities, and interactions with the proposed system.	Clearly and accurately defines the system boundaries, including what is included and excluded. Identifies all major user roles and their relevant perspectives, responsibilities, and interactions with the proposed system.

4.3 Project plan

High (4)	Average (3)	Low (2)	Unsatisfied (1)
Clearly identifies and assigns all project team members' roles and responsibilities. Provides a well-structured Gantt chart with realistic timelines, clearly defined tasks, and achievable milestones.	Clearly identifies and assigns all project team members' roles and responsibilities. Provides a well-structured Gantt chart with realistic timelines, clearly defined tasks, and achievable milestones.	Clearly identifies and assigns all project team members' roles and responsibilities. Provides a well-structured Gantt chart with realistic timelines, clearly defined tasks, and achievable milestones.	Clearly identifies and assigns all project team members' roles and responsibilities. Provides a well-structured Gantt chart with realistic timelines, clearly defined tasks, and achievable milestones.

4.4 Business Workflow and Process Modelling

High (4)	Average (3)	Low (2)	Unsatisfied (1)
Clearly and accurately documents the AS-IS workflow and business rules based on stakeholder input. Produces complete and logically consistent TO-BE Context and Level 0 DFDs, with correctly identified external entities, processes, data flows, and data stores where applicable.	Clearly and accurately documents the AS-IS workflow and business rules based on stakeholder input. Produces complete and logically consistent TO-BE Context and Level 0 DFDs, with correctly identified external entities, processes, data flows, and data stores where applicable.	Clearly and accurately documents the AS-IS workflow and business rules based on stakeholder input. Produces complete and logically consistent TO-BE Context and Level 0 DFDs, with correctly identified external entities, processes, data flows, and data stores where applicable.	Clearly and accurately documents the AS-IS workflow and business rules based on stakeholder input. Produces complete and logically consistent TO-BE Context and Level 0 DFDs, with correctly identified external entities, processes, data flows, and data stores where applicable.

5. Assessment recording sheet

Criterion	Score (1–4)
Organisational Background, Existing Practices and Problems	
System Boundaries and User Perspectives	
Project Plan	
Business Workflow and Process Modelling	
Total Score (16)
